

CARDATTACHING MACHINE

- Ultrasonic welding
- Not metal staples used
- Batch and expiration date printed in label
- Eurohole incorporated on label

Labelling machine for header label that automatically are fixed on products packed in vacuum bags, thermoformed packages, flowpacked products, etc. This labelling system allows the use of not printed film of the package, because all information is contained in label and this means more flexibility in packaging (i.e. no changing films is needed for different products in pack machine).

The adhesion of the cardboard is reached by ultrasonic welding without the use metal staples what this avoid the risk of perforation of sealed packages or accidental consumption of staples. This system allows installing end-of-line metal detector. Batch number and expiration date on the label are printed as option.

TECHNICAL DATA

Connection	230 V and compressed air to 6 bar
Dimension	600x1000x1600 mm
Weight	75 KG
Working rate	30 u/min
